WEBSPRINT 2026

Official Rulebook, Problem Statements, AI Policy, and Judging Guidelines

Event format	One-day web development hackathon
Level mix	Beginner to advanced problem statements
Teams	3-4 members
Selection	Choose one problem statement only
Special rule	Portfolio Website is only for 1st year students
Goal	Build, learn, and present a working project
Purpose	This document keeps the event simple, fair, and professional. The problem statements cover different difficulty levels so beginners, intermediate participants, and advanced teams can all take part comfortably.

1. Event Flow:

Time	Activity
10:00 – 10:20 AM	Registration & Team Check-in
10:20 – 10:30 AM	Opening Ceremony + Rules
10:30 – 10:45 AM	Problem Statement / Topics Announcement
10:45 – 12:30 PM	Hackathon Coding Session
12:30 – 1:00 PM	Mentor Round (Mentors guide teams)
1:00 – 3:30 PM	Continue Building Project
3:30 – 4:40 PM	Jury Evaluation Round (Judges visit teams one-by-one and see projects)
4:40 – 5:00 PM	Final Result Announcement

2. Participant Rules

Category	Rule
Team	3-4 members per team; at least one female member is mandatory.
Problem selection	One team can choose only one problem statement. No switching after selection.
Portfolio rule	Portfolio Website is reserved for 1st year students only.
Development	Project must be built during the hackathon. No pre-built projects are allowed.
Libraries / frameworks	Allowed, as long as the team can explain what they used and why.
AI usage	Allowed for concepts, debugging, snippets, and UI help, with understanding required for the final project.
Submission	Working demo and source code are required for evaluation.
Disqualification	Plagiarism, misbehavior, or violating the problem statement rules can lead to disqualification.

3. AI Usage Policy

Area	AI allowed	Understanding required
UI / CSS	Yes, fully allowed	Basic layout and design flow
Logic / JS / Backend	Yes, fully allowed	High understanding required
Features / flow	Yes, fully allowed	High understanding required
Debugging	Yes	Must understand the fix

Policy Note

Participants are allowed to use AI tools such as **ChatGPT & Gemini** throughout the development process, including for coding, UI design, debugging, and feature implementation.
However, teams must have a clear understanding of their project and should be able to confidently explain the logic, workflow, and implementation during evaluation.

Note: The use of **fully autonomous or cloud-based coding agents** (such as tools similar to Codex or other systems that can generate complete projects automatically with minimal human involvement) is **strictly prohibited**.

4. Judging System

Criteria	Marks	What it means
Idea understanding	15	How clearly the team explains the problem and their solution
Functionality	30	Whether the core features work as expected
UI / UX	15	Look, feel, responsiveness, and ease of use
Logic and implementation	20	Depth of coding, flow, and technical execution
Innovation	10	Extra useful features or creative approach
Presentation	10	Clarity, confidence, and demo explanation

5. Problem Statements Requirements:

Portfolio Website

Area	Checks
Core	Responsive design
	About / Skills / Projects sections
	Clean navigation
	Visual polish and spacing

Idea Sharing & Innovation Hub

Area	Checks
Core	Idea posting and sharing
	Feedback / comment system
	Collaboration flow
	Clean and user-friendly interface

Community Help & Support Platform

Area	Checks
Core	Help request posting
	Volunteer / accept request flow
	Status handling (pending / completed)
	Simple and usable interface
